ODBC Driver For NexusDB Crack Product Key Free Download For Windows

ODBC Driver For NexusDB With Registration Code Free

Use the KEYMACRO function to insert the currently selected value in the selected field with regard to the provided key value. SYNTAX: KEYMACRO(Key, KeyName, [DatabaseKey], [Value], [Database]) KEYMACRO Example: SELECT * FROM SALES WHERE CLIENT_ID = '1'; KEYMACRO Key: A field that holds the key value of the selected field. KeyName: A field that holds the name of the selected field. DatabaseKey: The reference to the field that holds the reference to the Database, the value of which is used to find the database. Database: The reference to the selected Database. Value: The value that is to be inserted into the selected field. Database Example: CURRENT DATABASE VALUE: SELECT CLIENT_ID FROM SALES WHERE SALES.CLIENT_ID = '1'; This function is only available if the Database supports a key and it is listed in the list of key name RESULT_VALUE Description: Retrieve the value of the current field or the last inserted value for the key name provided. SYNTAX: RESULT_VALUE(Key, KeyName, [DatabaseKey]) RESULT_VALUE Example: CURRENT DATABASE VALUE: SELECT RESULT_VALUE('CLIENT_ID', 'CLIENT_ID', 'SALES') FROM SALES WHERE SALES.CLIENT_ID = '1'; This function is only available if the Database supports a key and it is listed in the list of key name KEY_NEXT(Key, KeyName, [Index], [DatabaseKey], [Extended]) SYNTAX: KEY_NEXT(Key, KeyName, [Index], [DatabaseKey], [Extended]) KEY_NEXT Example: CURRENT DATABASE VALUE: SELECT KEY_NEXT('CLIENT_ID', 'CLIENT_ID', 'SALES') FROM SALES WHERE SALES.CLIENT_ID = '1'; This function is only available if the

ODBC Driver For NexusDB Crack+

The ODBC driver for NexusDB has the following benefits: 1. Supports native connections with NexusDB servers. 2. Works with multiple databases such as Oracle, MS SQL, MySQL, Firebird, Interbase and others. 3. Compatible with all common platforms including Windows, Linux, Unix, Mac OS X and others. 4. OPC compliant, with ODBC API and SSL support. 5. Quick install and configuration through ODBC system settings. 6. Reduces software requirements, since no additional software is needed to connect to the database environment. 7. Allows for a more reliable connection, reducing bandwidth usage, since the driver can directly connect to the database server with a direct connection method. 8. Works in most cases as a standalone application, which allows for greater productivity. For further information on ODBC, refer to the official web site at the Oracle Labs website: For a more detailed description of ODBC, please refer to the Open Database Connectivity (ODBC) Standard: For support information, please refer to the Oracle Forums or contact Oracle Technical Support Services: For more information on NexusDB products, please visit the following pages: Visit the Oracle website for more information on ODBC: For information on SSL Support, visit: The following document contains more detailed information on the ODBC Driver for NexusDB: The following document contains more detailed information on NexusDB:

What's New In?

ODBC Driver for NexusDB was designed in order to provide users with a connectivity solution that is targeted at ODBC-based applications that need to be linked to NexusDB database environments. Built with accessibility in mind, it supports all standard ODBC API functions and data types and it aims at offering enhanced database application interaction. The working principle of the driver employs capabilities for connecting to the NexusDB environment via a TCP/IP connection, without requiring any additional software libraries. By having the ability to establish a direct connection, the involved applications gain numerous advantages. Improved reliability, performance and overall quality for the deployment process, especially since there is no additional client required for the connection. The ODBC standards are fully supported, together with additional support for extra features, such as the Advanced Connection String parameters, for a universal connection regardless of the environment or platforms. Change log: [2011.04.09] Added: pGUID for various data types (from C++/ODBC) [2011.04.04] Added: String Conversion function for String data type [2011.03.23] Added: Nested Query function [2011.03.22] Added: Native Integer support (for various data types) [2011.03.22] Added: Support for Pivot Functions [2011.03.12] Added: ODBC DBCEnv->RecordsetClone function [2011.03.11] Added: ODBC Environments for different data types [2011.03.11] Added: RecordsetClone function for different data types [2011.03.10] Fixed: ODBC DBCEnv->GetSize Function [2011.03.09] Added: ODBC DBCEnv->GetStreamPosition Function [2011.03.09] Added: ODBC Environments for different data types [2011.03.08] Added: ODBC DBCEnv->GetRowsetCount Function [2011.03.07] Added: ODBC DBCEnv->GetRowsetCnt Function [2011.03.06] Added: ODBC DBCEnv->GetStatus Function [2011.03.06] Added: ODBC DBCEnv->GetType Function [2011.03.05] Added: ODBC DBCEnv->GetLastError Function [2011.03.03] Added: ODBC DBCEnv->Initialize Function [2011.03.03] Added: ODBC DBCEnv->SetState Function [2011.03.03] Added: ODBC DBCEnv->SetTrace Function [2011.03.03] Added: ODBC DBCEnv->GetTrace Function [2011.03.03]

System Requirements:

For Mac OS X, you need to be running Mac OS X 10.7.5 (Snow Leopard) or newer. You need to have Java 6 installed (current version is 6 update 31) in order to play the game. For Windows XP, Windows Vista, Windows 7, or newer you need to have Windows Update enabled and you need to have Java 6 installed. Minimum RAM to run the game: 32 MB If your system has less memory than this, it will be unable to run the game. Some cards do not
